

SRRT INTELLIGENCE

v4.0.0 User Guide

One account for AI, learning, software, evidence and market work.

PUBLIC RELEASE GUIDE

Updated 6 September 2026

www.srrtintelligence.app

This public guide explains the live SRRT experience without exposing private infrastructure, credentials, model files or provider details.

CHAPTER 01

Welcome to SRRT

SRRT Intelligence is a connected platform with a focused workspace for each kind of work.

What is available

Product	Purpose	Access
SRRT AI	General assistance, planning and intelligent workspace routing.	Pro
SRRT Learn	Learning chat, materials, quizzes, flashcards, notes and progress.	Free, Go, Pro
SRRT Code	Persistent software projects, resources and engineering outputs.	Go, Pro
SRRT Research	Evidence projects, sources, comparisons, synthesis and reports.	Go, Pro
SRRT Quant	Market data, portfolios and historical quantitative research.	Custom
SRRT Tools	Search, image, voice input and read-aloud when their cloud capacity is available.	Pro
Agents	Governed specialist assistance with admin visibility and human approval for high-risk actions.	Controlled access
SRRT APIs	Private model access for approved integrations.	Direct consultation
SRRT Cloud	Planned infrastructure services.	Coming later

Start in five minutes

- Create an account at www.srrtintelligence.app and verify your email.
- Sign in, open Overview and choose the workspace that matches your goal.
- Upload only material you are allowed to use and attach only what the task needs.
- Ask one clear question, review the result and verify important claims before using them.

First release

v4.0.0 brings SRRT AI, Learn, Code, Research and Quant into distinct workspaces, supported by SRRT Mini and SRRT Core 3.1.

CHAPTER 02

Account and security

Your account holds profile settings, conversations, projects, study records, plan access and privacy requests.

Create, verify and sign in

- Use a unique password. Open the verification email and use only the newest verification link.
- If you forget the password, request a one-time reset link from the sign-in page.
- Use Sign out on shared devices. Changing your password signs out other active sessions.

Never share these items

Never share	Safe support practice
Password or verification code	Support does not need either item.
API key, token or browser cookie	Hide these values in screenshots and messages.
Database or storage connection	Keep infrastructure details private.
Payment card details	Use only the official secure checkout screen.

Settings

- Update your display name, appearance and password.
- Review plan access, privacy requests and account deletion from Settings.

Official support

Email srrt@srrtintelligence.app or call +27 67 815 0895. Never send a secret in a support request.

CHAPTER 03

Navigation and plans

Overview shows recent activity and navigation opens every product available to your plan.

Main destinations

Destination	Use it for
Overview	Activity, progress, shortcuts and account summary.
SRRT Learn	Questions, explanations and material-grounded learning.
Quizzes, Flashcards, Notes	Practice, recall and saved study work.
Materials	Private source-file upload, status, opening and deletion.
Code and Research	Persistent projects, resources and generated artifacts.
SRRT AI	Independent general intelligence workspace.
Settings	Profile, security, plan, privacy and support.

Plan catalog

Plan	Price	Workspace access
Free	R0	SRRT Learn
Go	R250 / month	Learn, Code and Research
Pro	R400 / month	Learn, Code, Research, AI and Tools
Custom	Quoted	Selected products, usage and seats

Checkout

When secure checkout is enabled, the upgrade screen displays the amount before redirecting you to payment. A successful payment must return to SRRT and show a verified subscription status. If checkout is unavailable, no charge should be attempted.

CHAPTER 04

SRRT AI

SRRT AI is separate from SRRT Learn. It is the general intelligence entry point for work that is not only a study task.

Use SRRT AI for

- Understanding a task, planning next steps and organising complex work.
- General questions, drafting, structured thinking and selecting the right SRRT workspace.
- Continuing a conversation with earlier messages available as context.
- Routing suitable work toward Learn, Code or Research while keeping each product's responsibilities clear.

Ask clearly

Include	Example
Goal	I need a one-page project brief.
Context	The audience is a non-technical school principal.
Constraints	Use plain English and keep it under 500 words.
Output	Return headings, risks and next actions.

Model identity

SRRT Mini and SRRT Core 3.1 are SRRT Studios intelligence models. Public pages describe their roles without exposing private weights or implementation details. Private API access is arranged directly with SRRT Intelligence.

Important

- SRRT can be wrong. Verify academic, health, legal, financial and safety-critical information.
- Do not enter passwords, private keys, recovery codes or confidential information the task does not need.

CHAPTER 05

SRRT Learn and materials

Learn explains ideas, creates practice and can answer from your stored material.

A useful learning request

Example: Explain the quadratic formula at Grade 11 level. Show the equation as LaTeX, work one example, then give me one problem to try without revealing the answer.

Use your material

- Open Materials and upload a supported file up to 25 MB.
- Wait for the file status to show that it is ready.
- Open Learn, use the paperclip and attach up to five ready files.
- Ask a focused question and name the section, page or concept you want used.

Good material choices

Type	Best use
Searchable PDF	Lecture notes, papers and chapters.
PNG, JPEG, WebP	Clear upright pages, diagrams and readable images.
Text, Markdown, CSV, JSON	Notes, data and structured information.
Source code	Reference files for Learn or Code.

Only upload content you have permission to use. Remove secrets and unnecessary personal information.

CHAPTER 06

Study suite

Turn explanations into active practice and measurable progress.

Feature	What you do	What is saved
Quizzes	Choose topic and difficulty; generate, answer and submit.	Questions, answers, score and explanations.
Flashcards	Create or generate a deck and review it.	Deck, cards, subject and review activity.
Study notes	Write or edit a title, subject and note.	Private note and timestamps.
Goals	Set a target, subject, progress and optional date.	Progress and completion status.
Progress	Complete supported activities and revisit Overview.	Points, study time, streak and subject totals.

Recommended study loop

- Ask Learn to explain one difficult idea.
- Write a short note in your own words.
- Review a flashcard deck from memory.
- Take a quiz and read every explanation.
- Update the matching goal and repeat the weakest topic.

Math display

Responses support mathematical notation. If an equation is unclear, ask for the formula in LaTeX and request a separate step-by-step derivation.

CHAPTER 07

SRRT Code and Research

Use projects when work needs reusable context, sources and saved outputs across sessions.

SRRT Code

- Create a project and add only the files, URLs or pasted extracts needed for the task.
- Choose implement, debug, review, test, explain, refactor, documentation or architecture.
- Review generated code, run it in the real environment and scan it before deployment.

Code prompt: Debug the attached login handler. Preserve the API contract, explain the root cause, add a regression test and identify any security impact.

SRRT Research

- Create a project around one clear question or decision.
- Add each useful source as a file, URL or pasted extract.
- Choose synthesis, literature review, comparison, conflict analysis, gaps, table or report.
- Open original sources and verify every important claim before publication.

Research prompt: Compare the attached sources. Separate evidence from inference, identify conflicts and missing data, then produce a table with method, finding, limitation and confidence.

CHAPTER 08

Search, images and voice

The Tools workspace and Learn tool tray collect multimodal actions in one place.

Tool	How to use it	Check before relying on it
Grounded search	Ask a current question and open linked sources.	Confirm dates, source quality and quoted context.
Image creation	Describe subject, composition and style; download when available.	Images can contain errors; availability depends on active capacity.
Voice input	Allow microphone access, record and stop.	Review names, numbers and technical terms.
Read aloud	Play a response or paste short text.	Cloud audio may fall back to a device voice.

Browser permissions

- Voice input needs microphone permission for srrtintelligence.app.
- If permission was denied, update the site's microphone permission and retry.
- Available read-aloud voices can differ by browser and computer.

Service availability

A tool can be unavailable when its cloud capacity, account terms or usage balance is unavailable. Other SRRT workspaces can remain healthy at the same time.

CHAPTER 09

System status and governed agents

SRRT separates a service being present from it being operational.

Status language

Status	Meaning
Registered	The service or agent definition exists.
Running	Its runtime is active.
Reachable	Its endpoint answers a check.
Functional	It completed a representative task.
Healthy	All required operational checks passed.
Paused or unavailable	New work must not be sent to it.

Agent safety

- A Manager can coordinate available specialists and return a clean answer.
- Internal routing objects, prompts, credentials and raw control data must never be shown as the answer.
- High-risk actions require authorised human approval and an audit record.
- A claimed delegation should correspond to a real execution record; otherwise it has not been executed.

Most agent controls are administrative and are not visible to normal accounts.

CHAPTER 10

Privacy, safety and deletion

Use Settings to submit tracked privacy and account-deletion requests.

Privacy requests

- Open Settings and choose Access my data or Correct my data.
- Add useful details, submit and track the request status.
- SRRT verifies account ownership before changing or releasing data.

Delete account and data

- Open the deletion section in Settings, type DELETE and submit the tracked request.
- An authorised administrator processes an approved deletion through the tracked request.
- Eligible account and product data is removed after ownership and request checks.
- Some records can be retained where required for security, fraud prevention, contracts or law.

Responsible use

- Do not use SRRT to harm others, distribute malware, bypass security or violate privacy and intellectual-property rights.
- Do not present generated work as verified fact where verification or disclosure is required.
- Minimise personal information and never upload secrets.

CHAPTER 11

Troubleshooting and support

Try the smallest safe fix first, then send support exact evidence without exposing private information.

Problem	Try this
Cannot sign in	Check email spelling and verification, use Forgot password, allow cookies and reload once.
Verification link fails	Request a new email and use only the newest official link.
Upload fails	Confirm the type and 25 MB limit; sign in again and retry once.
Material text unavailable	Use a searchable PDF, text file or clear image.
No AI response	Shorten the request, attach fewer files, wait briefly and retry once.
Image unavailable	Image capacity may be inactive. Try later or contact support.
Microphone unavailable	Allow site permission and close another app using the microphone.
Math looks wrong	Ask for LaTeX and a separate display equation.

Contact SRRT

Channel	Details
Email	srrt@srrtintelligence.app
Phone	+27 67 815 0895
WhatsApp	https://wa.me/27678150895
Website	https://www.srrtintelligence.app/contact

- Include the page, action, visible message, date and time, and whether it happens every time.
- Hide personal information. Never send a password, code, token, key or payment information.

CHAPTER 12

Quick reference

Keep this page nearby until the main platform flow feels familiar.

Task	Shortest path
Use SRRT AI	Sign in > SRRT AI > New conversation > Send.
Ask Learn	Sign in > SRRT Learn > New conversation > Send.
Use a source	Materials > Upload > Ready > Learn paperclip > Select files.
Practice	Quizzes or Flashcards > Choose topic > Generate.
Save a note	Study notes > New note > Choose subject > Save.
Work on software	Code > Create project > Add resource > Choose operation.
Build evidence	Research > Create project > Add sources > Choose operation.
Analyse markets	Quant > Market Data, Portfolio or Backtest Lab.
Discuss API access	SRRT APIs > Talk to SRRT Intelligence.
Change password	Settings > Password.
Request deletion	Settings > Delete account and data.

Key limits

Item	Current limit
Material size	25 MB per file
Files attached to one message	Up to 5
Chat input	Up to 20,000 characters
Free user-facing chat	Up to 50 messages per day

Guide status

This guide reflects SRRT Intelligence v4.0.0 on 6 September 2026. Live product availability, Privacy Policy and Terms of Use on srrtintelligence.app remain the controlling public notices.
